<b>C Reactive Protein</b>	<b>: 7.4</b>	mg/L	0-5.00

Method : Immunoturbidimetry

Method :Immunoturbidimetry ....

- C-Reactive Protein (CRP) is an acute phase protein whose concentration rises non-specifically in response to inflammation.
- CRP is seen to increase as a result of the inflammatory process,most notably in response to pneumococcal (bacterial) infection,histolytic disease and a variety of other disease states.
- CRP is used as general diagnostic indicator of infections and inflammation,in addition to serving as a monitor of patient response to pharmacological therapy and surgery.
